

ASTROCOM™

PowerLink Pro50, Pro100 & Pro250

Guaranteed uptime at the right price.

As your networks grow, so does your reliance on the Internet. Downtime is something you simply cannot afford. The PowerLink ProSeries Internet appliances provide automatic link failover between WAN connections, including VoIP failover with traffic shaping, to guarantee 100% availability and performance. No one does failover better than PowerLink. And no one provides a lower total cost of ownership.

End your reliance on a single Internet connection or provider

Your customers and employees expect constant connectivity and consistent network performance. You can't do that with a single ISP. The PowerLink ProSeries creates multi-homed networks of up to 15 low-cost WAN links to eliminate link congestion and bottlenecks. Your business-critical applications are guaranteed full connectivity and continuous service.

PowerLink ensures that critical applications get the bandwidth they need

PowerLink provides intelligent outbound and inbound traffic management and load balancing across all WAN links. Users experience no delays and no frustrations. Your business-critical applications are always there when you need them.

PowerLink provides 100% availability

PowerLink's automatic link failover and traffic shaping guarantee availability and performance for applications sensitive to WAN link delays or failover.

PowerLink is easy to install and effortless to maintain.

PowerLink has many plug-and-play setup features that make it very easy to install. It's transparent to your firewall. And there are no expensive routers or complex routing protocols to maintain.

PowerLink is affordable and scalable

PowerLink is easily one-third the cost of other brand named appliance-based ISP load balancing products. And only PowerLink features free support for 90 days, including network design, configuration and installation assistance. Plus, no product is easier to scale than PowerLink. As your network bandwidth needs grow, PowerLink makes it easy to simply plug in another WAN link for all the bandwidth your applications need and the availability and performance your employees and customers expect.

PowerLink Pro50,
Pro100 and Pro250

BENEFITS >

- Ensures 100% uptime for your business-critical Internet applications.
- Makes it easy and affordable to combine multiple low-cost links of bandwidth.
- Is easy to install and support.
- Provides the lowest total cost of ownership available.
- Select a PowerLink ProSeries appliance that precisely meets your needs and budget.
- Includes 90 days of free service and support.
- Includes a 30-day money-back guarantee.
